Art Unit: 1633

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-9, drawn to an isolated recombinant adenoviral vector comprising an adenoviral genome lacking E1A/E1B genes, a transgene coding a heat shock protein or the adenosine A3 receptor, and a promoter, and a method of producing said isolated recombinant vector, classified in class 435, subclass 320.1.
 - II. Claims 10-20, drawn to a method of elevating the level of stress related factor in the myocardium of a patient by delivering a replication-deficient viral vector expressing a stress related factor to said myocardium, classifiable in classes 435 and 514, subclasses 455 and 44, respectively.

2. The inventions are distinct, each from the other because of the following reasons:

Groups I and II are distinct from each other because they are drawn to materially distinct methods which differ at least in objectives, method steps, reagents and/or dosages and/or schedules used, response variables, and criteria for success. The scientific considerations for groups I and II are different because a replication-deficient viral vector could be different from an adenoviral vector lacking E1A/E1B genes. Further, a method of producing an isolated recombinant adenoviral vector comprising an adenoviral genome lacking E1A/E1B genes, a transgene coding a stress related factor, and a promoter, and a method of elevating the level of stress related factor in the myocardium of a patient by delivering a replication-deficient viral vector expressing a stress related factor to said myocardium are different methods with different objectives, different starting materials and reagents, different method steps and response

variables, and different criteria of success. Thus, groups I and II are patentably distinct from each other. They have different classifications and require separate search.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
